## PERSONAL PROJECTS

### Spam Detection Model
- **Description:** -
- This project is used to check whether the given mail is spam or not.
- To train this model I used MultinomialNB algorithm
- And the accuracy of my model is about 98%

### Body, Hand, Pose Detection
- **Description:** -
- In this project I used library names Mediapipe and OpenCV
- Mediapipe is used to detect pose or body parts.
- OpenCV is used to activate my camera.

### To-Do-List
- **Description:** -
- This project is used to make to-do-lists.
- To create this, I used flask framework (Python Module).
- To store I used SQLAlchemy, which is Python library for handling databases

### Electricity Saver
- **Description:** -
- This project is used to save electricity
- **Working Process:** -
- When we come close to the camera, the light turns on automatically.
- We did this without using any sensor.
- MATLAB is used to train a model.
